Additional  
manufacturing  
locations:

This certificate is issued as verification that a sample(s), representative of production, was assessed and tested and found to comply with the IEC Standard list below and that the manufacturer's quality system, relating to the Ex products covered by this certificate, was assessed and found to comply with the IECEx Quality system requirements. This certificate is granted subject to the conditions as set out in IECEx Scheme Rules, IECEx 02 and Operational Documents as amended

#### STANDARDS :

The equipment and any acceptable variations to it specified in the schedule of this certificate and the identified documents, was found to comply with the following standards

**IEC 60079-0:2017** Explosive atmospheres - Part 0: Equipment - General requirements  
Edition:7.0

**IEC 60079-11:2011** Explosive atmospheres - Part 11: Equipment protection by intrinsic safety "i"  
Edition:6.0

**IEC 60079-28:2015** Explosive atmospheres - Part 28: Protection of equipment and transmission systems using optical radiation  
Edition:2

This Certificate **does not** indicate compliance with safety and performance requirements other than those expressly included in the Standards listed above.

#### TEST & ASSESSMENT REPORTS:

A sample(s) of the equipment listed has successfully met the examination and test requirements as recorded in:

Test Report:

[GB/CML/ExTR19.0169/00](#)

Quality Assessment Report:

[GB/SIR/QAR07.0023/13](#)

## EQUIPMENT:

Equipment and systems covered by this Certificate are as follows:

The 947x Series Intrinsically Safe (IS) Ethernet Modules provide communication between networked devices in the Hazardous Area using Gigabit Ethernet technology. There are several types of modules described below, all of which are suitable to be located in the hazardous area.

These are designated as:

Type	10/100/1000Mbps (Gigabit)	10/100Mbps
9471	9471-ETG Serial Gateway	9471-ET Serial Gateway
9475	9475-ETG Media Converter	9475-ET Media Converter
9476	9476-ETG Ethernet Switch	9476-ET Ethernet Switch
9479	9479-ETG WLAN AP/Bridge	9479-ET WLAN AP/Bridge

See Annex for full description and Conditions of Manufacture.

**SPECIFIC CONDITIONS OF USE: YES as shown below:**

See Annex for details

### Description:

The 947x Series Intrinsically Safe (IS) Ethernet Modules provide communication between networked devices in the Hazardous Area using Gigabit Ethernet technology. There are several types of modules described below, all of which are suitable to be located in the hazardous area.

These are designated as:

Type	10/100/1000Mbps (Gigabit)	10/100Mbps
<b>9471</b>	9471-ETG Serial Gateway	9471-ET Serial Gateway
<b>9475</b>	9475-ETG Media Converter	9475-ET Media Converter
<b>9476</b>	9476-ETG Ethernet Switch	9476-ET Ethernet Switch
<b>9479</b>	9479-ETG WLAN AP/Bridge	9479-ET WLAN AP/Bridge

### 9471-ETG Serial Gateway and 9471-ET Serial Gateway

The 9471-ET(G) 4-Port Serial Gateway allows existing Intrinsically Safe equipment with an RS485/RS422 or RS232/TTL port to become Ethernet Enabled via a Cat5/6 cable connection into an IS Ethernet Network (LAN). The unit has 4 off serial ports, each one supporting either RS485/RS422 or RS232/TTL depending upon the configuration required. There are 2 off RJ45 (LAN) ports that support 10/100 or Gigabit 10/100/1000 (G option) IS Ethernet connections - these allow 'daisy-chaining' of Ethernet units together.

The module consists of a single printed circuit board (9471-COM) mounted inside an anti-static plastic DIN rail enclosure. Excluding the user connectors and LED's the unit is totally encapsulated. The module is suitable for mounting in the Hazardous Area within an enclosure having a minimum protection level equivalent to or exceeding IP54.

Electrical connections are via cage-clamp and/or screw type plug/socket terminals along with RJ45 type connectors for the Ethernet LAN ports.

Power (12V IS) is supplied to the module either locally or using Power over Ethernet (PoEx) from the LAN port - This requires the PoEx output to be wired to the Supply Input terminals by the user. Note that PoEx is not available on Gigabit LAN ports.

### 9475-ETG Media Converter and 9475-ET Media Converter

The 9475-ET(G) Dual Media Converter provides fibre-optic connections to extend an IS Ethernet Network (LAN) over a greater distance. The use of 1300nm optics allows a longer fibre-optic link length, typically 5Km at 10Mbps, 2Km at 100Mbps and by using different optics 10Km at (Gigabit) 1000Mbps. There are 2 off RJ45 (LAN) ports that support 10/100 or 10/100/1000 Gigabit (G option) IS Ethernet connections - these can allow 'daisy-chaining' of Ethernet units together. The Media Converter incorporates an Ethernet switch that helps eliminate any compatibility issues and aids fault finding. The switch also allows the unit configuration as either two separate independent media converters or a fibre-optic repeater with two local LAN ports.

# IECEX Certificate of Conformity

## Annexe

**Annexe for Certificate No.:**

**IECEX ExTC 20.0019X**

**Issue No.:**

**0**

The module consists of a single printed circuit board (9475-FO) mounted inside an anti-static plastic DIN rail enclosure. Excluding the user connectors and LED's the unit is totally encapsulated. The module is suitable for mounting in the Hazardous Area within an enclosure having a minimum protection level equivalent to or exceeding IP54.

Electrical connections are via cage-clamp and/or screw type plug/socket terminals along with RJ45 type connectors for the Ethernet LAN ports.

Power (12V IS) is supplied to the module either locally or using Power over Ethernet (PoEx) from the LAN port - This requires the PoEx output to be wired to the Supply Input terminals by the user. Note that PoEx is not available on Gigabit LAN ports.

### **9476-ETG Ethernet Switch and 9476-ET Ethernet Switch**

The 9476-ET(G) 6 Port Ethernet Switch provides six LAN ports for connection to other IS Ethernet devices. There are 6 off RJ45 (LAN) ports that support 10/100 or 10/100/1000 Gigabit (G option) IS Ethernet connections depending on the model type. The switch provides management to allow configuration of the ports and provide diagnostic information, however it may be also be utilised in an un-managed mode where all ports by default Auto-Negotiate with no user configuration required.

The module consists of a single printed circuit board (9476-SW) mounted inside an anti-static plastic DIN rail enclosure. Excluding the user connectors and LED's the unit is totally encapsulated. The module is suitable for mounting in the Hazardous Area within an enclosure having a minimum protection level equivalent to or exceeding IP54.

Electrical connections are via cage-clamp and/or screw type plug/socket terminals along with RJ45 type connectors for the Ethernet LAN ports.

Power (12V IS) is supplied to the module locally and Power over Ethernet (PoEx) can be used for the 10/100 LAN ports if required to power compatible connected devices. Note that PoEx is not available on Gigabit LAN ports.

### **9479-ETG WLAN AP/Bridge and 9479-ET WLAN AP/Bridge**

The 9479-ET(G) WLAN AP/Bridge provides a wireless (Wi-Fi) connection as well as the IS Ethernet Network (LAN) ports. The use of 2.4GHz and 5GHz allows connections to various wireless devices in the Hazardous Area. There are 2 off RJ45 (LAN) ports that support 10/100 or 10/100/1000 Gigabit (G option) IS Ethernet connections – these can allow 'daisy-chaining' of Ethernet units together.

The module consists of a single printed circuit board (9479-WL) mounted inside an anti-static plastic DIN rail enclosure. Excluding the user connectors and LED's the unit is totally encapsulated. The module is suitable for mounting in the Hazardous Area within an enclosure having a minimum protection level equivalent to or exceeding IP54.

Electrical connections are via cage-clamp and/or screw type plug/socket terminals along with RJ45 type connectors for the Ethernet LAN ports and two SMA type RF connectors for the antenna(s).

Annexe for Certificate No.:

IECEX ExTC 20.0019X

Issue No.:

0

Power (12V IS) is supplied to the module either locally or using Power over Ethernet (PoEx) from the LAN port - This requires the PoEx output to be wired to the Supply Input terminals by the user. Note that PoEx is not available on Gigabit LAN ports.

### Components covered by Ex Certificates issued to older editions of Standards

Certificate number	Standards (incl. Ed)	Assessment result
IECEX SIR 05.0015U	IEC 60079-0:2000 Ed 3.1 IEC 60079-11:1999 Ed 4	Technical differences evaluated and found satisfactory. For detail see ExTR

### Specific Conditions of Use pertaining to Issue 0 of this Certificate:

The following conditions relate to safe installation and/or use of the equipment:

- i. For Group I, the modules shall each be mounted within an enclosure providing a degree of protection of at least IP54.

This shall be in accordance with IEC 60529, and the modules installed in a manner that does not impair the existing creepage and clearance distances. The enclosure shall also comply with the appropriate requirements of Clauses 7.4.2 and 7.5, or 8.2 of IEC 60079-0.

- ii. The supply to the modules must be derived from a suitably certified, intrinsically safe supply.
- iii. The values of Co and Lo provided below shall apply when one of the two conditions below is given:
  - The total Li of the external circuit (excluding the cable) is < 1% of the Lo value, or
  - The total Ci of the external circuit (excluding the cable) > 1% of the Co.

The above parameters are reduced to 50% when both of the two conditions below are given:

- The total Li of the external circuit (excluding the cable) > 1% of the Lo, and
- The total Ci of the external circuit (excluding the cable) > 1% of the Co.

Note: the reduced capacitance of the external circuit (including cable) shall not be greater than 1  $\mu$ F for Group I.

- iv. The equipment shall be mounted on an earthed metal bracket or housing.

# IECEX Certificate of Conformity

## Annexe

Annexe for Certificate No.:

IECEX ExTC 20.0019X

Issue No.:

0

### 10/100 and Gigabit 10/100/1000 Ethernet Ports

Group	Capacitance ( $\mu$ F)	Inductance ( $\mu$ H)	or	L/R Ratio ( $\mu$ H/Ohm)
I	1000	24.5		73

If PoEx is used, then the parameters of the PoEx power supply must also be considered  
(The above capacitance figures are based on 5.88V)

The 10/100 or Gigabit 10/100/1000 Ethernet ports may be connected to any other equipment having appropriate Entity parameters.

### **Conditions of Certification (Manufacturer's Responsibility) pertaining to Issue 0 of this Certificate:**

The following conditions are required of the manufacturing process for compliance with the certification:

- i. Where the product incorporates certified parts or safety critical components, the manufacturer shall ensure that any changes to those parts or components do not affect the compliance of the certified product that is the subject of this certificate.

### **Drawing list pertaining to Issue 0 of this Certificate:**

<b>Manufacturer's Documents</b>
